Constrained Application Protocol (draft-ietf-core-coap-12,

draft-ietf-core-block-10, draft-ietf-core-observe-07)

The Constrained Application Protocol (CoAP) is a specialized web transfer protocol for use with constrained nodes and constrained (e.g., low-power, lossy) networks.

CoAP Message Format

Link Format .well-known/core

Link format can be used to describe hosted resources, their attributes, and other relationships between links.

Example:

Block

In order to transfer larger payloads with CoAP — for instance, for firmware updates — the Block option can be used.

Observe

In order to follow state changes of CoAP resources the Observe option can be used.
